Sponsors may come from various levels of the organization, including senior management or external stakeholders.
3. **Functional Managers:** Functional managers are responsible for managing specific areas of expertise within the project. They oversee project tasks related to their functional area, such as engineering, marketing, or human resources. Functional managers work closely with the project manager to ensure that their team's contributions align with the overall project goals. Functional managers may also provide technical guidance and support to the project team.

4. **Team Members:** Team members are the individuals who carry out the day-to-day tasks of the project. They possess the specialized skills and knowledge required to complete their assigned tasks effectively. Team members may come from different functional areas, bringing diverse perspectives and expertise to the project. They are accountable for meeting deadlines, delivering high-quality work, and communicating progress to the project manager.
5. **Stakeholders:** Stakeholders are individuals or groups who have an interest in the project's outcome. They can include customers, end-users, suppliers, regulators, and the community. Stakeholders may have varying levels of influence on the project, and their needs and expectations must be considered throughout the project lifecycle.
